Vicmap Admin

Title:	Vicmap Admin
Metadata ID:	1553f19f-3b03-5e40-924e-6355eb9a3f89
Resource Name:	VICMAP_ADMIN
Publication Date:	
Spatial Extent:	General - Victoria
Owner:	Department of Transport and Planning
Custodian:	Department of Transport and Planning
Data access:	Unclassified
Jurisdiction:	Victoria
Abstract:	This dataset series contains polygon features delineating key Victorian administrative boundaries. It comprises several data sets and is part of the Vicmap suite of products. Datasets in the series are listed below. See their individual metadata entries for more product specific metadata. Local Government Area Boundaries - LGA_POLYGON (aligned to Property); Local Government Area Boundaries - AD_LGA_AREA_POLYGON (aligned to Topo); Locality Boundaries - LOCALITY_POLYGON (aligned to Property): Locality Boundaries - AD_LOCALITY_AREA_POLYGON (aligned to Topo); Postcode Boundaries - POSTCODE_POLYGON (aligned to Property); Parish Boundaries - PARISH_POLYGON; Township Boundaries - TOWNSHIP_POLYGON; Victorian Lower House Electoral Boundaries 2022 - STATE_ASSEMBLY_2022; Victorian Upper House Electoral Boundaries 2022 - STATE_COUNCIL_2022; Ward Boundaries (Property) - WARD_2024; Victorian Government Regional Departmental Boundaries - VICGOV_REGION (aligned to Property); Victorian Government Regional Departmental Boundaries - AD_VICGOV_REGION (aligned to Topo); Dept of Environment, Land, Water and Planning - DELWP_REGION (aligned to Topo) - to be removed in November 2025; Dept of Energy, Environment and Climate Action - AD_DEECA_REGION (aligned to Topo); Country Fire Authority (CFA) District Boundaries - CFA_DISTRICT; Country Fire Authority (CFA) Region Boundaries - CFA_REGION;

Country Fire Authority (CFA) Total Fire Ban Districts - CFA_TFB_DISTRICT;

Fire Rescue Victoria Regions - FRV_REGION;

Fire Rescue Victoria Districts - FRV_DISTRICT;

Fire Rescue Victoria Response Area - FRV_RESPONSE_AREA;

Fire Rescue Victoria Legislated Boundary - FRV_LEGISLATED_BOUNDARY;

Emergency Management Victoria Regions - EMERGENCY_MANAGEMENT_REGION.

Purpose:

Vicmap Administrative provides an accurate representation of various administrative boundaries across Victoria, aligned with other Vicmap data having varying capture scales from 1:500 to 1:25,000. Its use is intended for a variety of applications including, emergency services, natural resource management, planning and development, and digital map publications.

Data Currency Information:

Data Set Status:

Completed

Data Collection:

Collection Period:

1999-01-01 - Now

Update Frequency:

Continual

Dataset Information:

Dataset Source:

Dataset Source: Data has initially been drawn from authoritative sources. Detail is primarily aligned to varing versions of Vicmap and other assorted data. Positional accuracy of all content, although accepted as meeting a reasonable level of alignment, cannot therefore be accurately stated. DSE-SII formalises maintenance arrangements with authoritative sources and realigns the data with its underlying defining features (eg road, property boundary) depicted in the Vicmap Framework data sets. An accuracy attribute is given for every feature in Vicmap data. Users must therefore read the accuracy attribute of any given admin feature in order to determine whether it aligns with and therefore inherits the accuracy of the underlying Vicmap product or is part of the original data and may therefore be of a lesser order of accuracy.

Dataset Originality: Derived

Collection Method: Conversion of existing data, realignment to underlying Vicmap features as r

Dataset Processing Details:

- existing admin boundary data obtained

- data reviewed to confirm acceptable acceptable level of alignment to Vicmap products

- custodianship, source and maintenance flows established

- update data aligned to Vicmap products

- other data fully realigned to Vicmap whetre required and as resourcing allows

Positional Accuracy:

The planimetric accuracy attainable will be the sum of errors from three sources: the positional accuracy of the source material, errors due to the conversion process, errors due to the manipulation process. For topographic base derived data this calculation represents an error of 8.3m on the ground for 1:25,000 data. A conservative estimate of 10m for the standard deviation will be used in any data quality information. Alternate and equal ways of expressing this error are: not more than 10% of well-defined points will be in error by more than 16 m. The worst case error for the data is +/- 30 m. For vertical positional accuracy of points determined from contours there is an expectation that the elevation accuracy (standard deviation) will be half the value of the contour interval.

Attribute Accuracy:

For this product attribute accuracy ranges between a 1% to 5% error.

For this product attribute accuracy is a measure of the degree to which features and attribute values of spatial objects agree with the information on the source material.

Logical Consistency:

The allowable error in attribute accuracy ranges between 1% to 5% error.

Logical consistency is a measure of the degree to which data complies with the technical specification. The test procedures are a mixture of scripts, software based tests and on-screen visual checks.

Completeness:

Complete
